Water sensitive cities

Tackling storm-water runoff that flows through city streets until it reaches the rivers and seas, causing wastage and pollution. The Center for Water Sensitive Cities in Israel and KKL-JNF, have joined together to promote a sustainable and unified environmental policy to deal with the escalating problem of urban water contamination.

We will start our day in the water company of Kfar Saba municipality where we will meet Dr. Yaron Zinger, head of the Center for Water Sensitive Cities in Israel. Dr. Zinger will talk about the model of water sensitive cities and will take us to see the Kfar Saba innovative bio-filter project, which is designed to allow rainwater to be utilized in order to avoid pollution and prevent groundwater levels from dropping further.
